What happens in the first few weeks following the amputation?

Fitting Process

- **Continuous control**: Your certified medical supply company always stays in touch with you.
- **Examination**: A personal interview and thorough physical examination are carried out at the beginning of a fitting.
- **Therapy**: This is followed by therapeutic measures to prepare you for a prosthetic fitting.
- **Fitting recommendation**: This is where you learn which prosthesis is recommended for you and what personal goals you should pursue.
- **Production**: Fabrication of a custom prosthesis follows.
- **Measuring**: The prosthetist records the individual body measurements.
- **Trial fitting**: During the trial fitting, the prosthetist adapts the prosthesis to your individual needs.
- **Rehabilitation**: Here you learn the proper use of your prosthesis on a day-to-day basis.
- **Quality control**: You discuss your ability to use the prosthesis with your rehabilitation team.

Reasons for the amputation
